## Coarse Grain Mix

**Note: This product is Anti-biotic and Hormone free**

### PRODUCT DESCRIPTION

Advanced Coarse Grain Mix is a high energy supplement including cracked and whole grains and seeds, lightly coated with molasses to reduce dust and improve palatability. Suitable as a supplement for large wild birds such as cockatoos and domestic poultry such as non-laying ducks, geese and guinea Fowl.

Being a coarse grain mix it can be fed in self feeders, feed pans or spread on the ground for birds to peck.

This is not a complete feed for young growing animals or production animals, but can be mixed with protein meals and minerals to make a complete feed.

Next time at your local produce store, check where some products sold in FNQ are actually made. You might be surprised to find some travel all the way from South Australia. Think of the food miles saved by supporting this high quality product made on the Atherton Tablelands from Queensland grown Corn, Sorghum and Wheat.

### TYPICAL ANALYSIS: (AS-FED)

Min. Crude Protein	9.00%
Min. Calcium (Ca)	1.00%
Min. Crude Fat	3.00%
Min. Phosphorus (P)	0.20%
Max. Crude Fibre	5.00%
Max Salt (NaCl)	None Added

### ADDED MINERALS AND VITAMINS

Min. Selenium (Se)	None Added
Min. Copper (Cu)	None Added

### DIRECTIONS FOR USE

Feed as an energy supplement to all mature birds and poultry.

This is not a complete feed for laying birds, as the protein and mineral content is too low to support the high demands

of egg production. Young growing birds will need a higher protein level than what is supplied in the Coarse Grain Mix.

Laying hens should be fed on a complete layer feed such as Advanced Coarse Layer Mash or Advanced Premium Layer Crumble.

Advanced Rural have a feeding program for rearing hens from day old. Advanced Chick Starter Crumbles should be fed from hatching to 8 weeks of age. Advanced Pullet Grower Crumbles should be fed from 8 weeks until first eggs are laid.

Birds are creatures of habit and do not like feed changes. Changes from one feed to another are best made gradually to allow birds to adapt and accept the new feed type.

Always keep feed troughs clean and remove stale feed. Ensure fresh, clean drinking water is always available.

### STORAGE

Feed is best store under cover in a cool, dry place below room temperature (30°C.)

In the tropics keeping feed over the wet humid months is always a challenge. Keeping feed in sealed containers to keep insects and moisture out will maximise shelf life.

Insect infestations like web moth, lemon mite and weevils are quite common in the tropics and although undesirable, they do not make feed unusable.

Mouldy feed will result if moisture levels increase above 14 % in hot weather. Feed left in the bag or open containers will absorb moisture in hot humid weather.

Mould can produce toxins and chickens can be very sensitive to mould toxins. Mouldy feed should never be fed to poultry.

FEED IS BEST USED BEFORE 6 MONTHS FROM  
DATE OF MANUFACTURE.
